MASTER OF CHILD PSYCHOTHERAPY

med.monash.edu
ARE YOU WORKING IN CHILD AND FAMILY SERVICES, MENTAL HEALTH, EDUCATION OR WELFARE?

MASTER OF MENTAL HEALTH SCIENCE / MASTER OF CHILD PSYCHOTHERAPY

This qualification is highly regarded by students as being extremely relevant professional development for their work with children and families. The Child Psychotherapy specialisation imparts a deep understanding of psychoanalytic developmental theories and practice and how it can help infants, children, adolescents, and their families with emotional and behavioural problems.

This Master of Child Psychotherapy is located within a suite of degrees represented by this Master of Mental Health Science program. This three year part-time online course provides advanced training and upskilling taught by accomplished academics and clinicians within the Department of Psychiatry at Monash University. Assessment is by coursework and includes assignments, observations and a face-to-face weekend workshop each semester.

Completing all units in this pathway fulfills the academic component of the Child Psychoanalytic Psychotherapists Association of Australia (CPPAA) clinical training as described on their website. It also fulfills part of the criteria for professionals to be eligible for membership of the Child Psychoanalytic Psychotherapists Association of Australia. This will be of interest to students who wish to apply to the CPPAA for clinical training alongside this Master qualification.

*Formerly known as the Victorian Child Psychotherapists Association (VCPA)
